ACRISS CLOUD
EDUCATE • INFLUENCE • COMMUNICATE

The ACRISS Cloud is an easy to implement solution for both Car Rental suppliers and their partners in solving the problems of outdated vehicle images and specifications. This means that potential customers always view current up to date vehicle images and information.

Images are hosted by ACRISS Cloud and passed on to the partners in a consistent format eliminating the need for different formats and processes for each partner, resulting in a more efficient process.

Easily upload your entire fleet of vehicle images

Image output can also be tailored to partners specific requirements

Automated exports help to keep partners systems up to date and allow more flexibility

Images will always be up to date, and can be held locally to allow the best user experience possible for customers of partners sites.
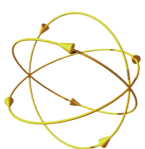

The ACRISS Cloud has 3 easy solutions to distribute the car images

Up and running in no time

If you are interested in using ACRISS Cloud either as a supplier or partner, please contact your Car Rental Supplier, your partner's Account Manager or ACRISS representative. Account access is straight forward and in no time, you will have access to current images and specifications.

These images can be supplied via email and the partners are then prompted when image updates are available. Alternatively, to help take manual workload out of the equation, these can be supplied via FTP or XML to the partners.

ACRISS ®
EEIG
association of car rental industry systems standards
